

New and established patients are charged a contact lens fitting fee.

Why a fitting fee?

- Contact lenses take extra time and special testing beyond the normal medical/ vision exam
- A proper base curve and diameter for the contact lens is determined after various tests
- Instruction on insertion and removal is given
- Proper care of contact lenses is given along with a sample of contact lens solution
- Dr. Mattingly checks the fit of the lenses along with vision
- Diagnostic lenses are dispensed when possible; some will have to be ordered for more complex prescriptions
- Patient returns in one week for follow-up; at this visit, vision and fit are re-evaluated
- A written prescription is given at one week follow up if patient is doing well. Further follow-ups may be necessary
- A contact lens prescription is valid for one year

Established patients:

- A reduced fee is charged if the following are met. Otherwise, the fitting will be charged at the normal rate
- The contact lens manufacturer does not change
- A minimal prescription change occurs (+/-0.50)
- Vision and fit are re-evaluated to ensure proper fit and no visual change has occurred
